

March 29, 2019

Dear Valued Customer:

As you may be aware, PSE&G is working on a statewide plan to upgrade its infrastructure to ensure that the utility can meet the needs of customers today and well into the future. Approved by PJM Interconnection, these infrastructure upgrades include the addition of a 69,000-volt (69kV) network that will alleviate the demand on the existing network. These upgrades will increase both electric service reliability and system redundancy to ensure safe and reliable electric service to our customers. Since 2007, PSE&G has installed more than 400 miles of 69kV lines in more than 93 municipalities in New Jersey.

As part of these upgrades, PSE&G will install taller, sturdier utility poles and run new electric wires on the utility right of way along South Avenue in Westfield. In accordance with the Board of Public Utilities' Vegetation Management Rules, we are required to trim and remove trees, where necessary. There are no planned service interruptions associated with this work.

PSE&G would like to invite you to learn more about the project at an upcoming public workshop. The workshop will be held from 7 p.m. to 9 p.m. on April 10 at the Edison Intermediate School, 800 Rahway Ave.

Project management and experts will be available to answer residents' questions on an individual basis to get the information that is important to them. Residents can stop by the workshop at any time. Please note that there will be no formal presentation.

PSE&G has more than a century of experience in building and maintaining utility services that provide safe, reliable, low-cost and greener energy to New Jersey residents. We are committed to constructing PSE&G's reliability projects in accordance with all safety and environmental standards, while being sensitive to the needs and concerns of our neighbors.

Residents can submit questions in advance of the workshop at reliability@pseg.com. More information is also available at www.pseg.com/69kV.

Thank you very much,

Kristine Lloyd
